ABOUT ME

I am a front-end-oriented software developer with advanced experience in the Nuxt.js and Vue.js ecosystem. I have developed large-scale, data-intensive, and performance-sensitive applications using TypeScript, Composition API, Pinia, and Vuetify. I have designed reporting interfaces, analytics dashboards, structured component architectures, and responsive tables powered by thousands of lines of dynamic JSON data. I am experienced in building sustainable and scalable component and composable architectures that reduce code duplication. I have managed REST API integrations, polling mechanisms, WebSocket implementations, file upload processes, and data analysis workflows. I prioritize performance optimization, user experience (UX), clean code, and maintainability in all projects. I possess strong foundations in HTML5, CSS3, and modern JavaScript (ES6+), along with expertise in responsive design, technical SEO (site structure, indexability, Core Web Vitals), performance optimization, and security best practices. I have hands-on experience with WordPress and Elementor, including full website setup, theme customization, and e-commerce structures (product pages, cart, checkout flows). Additionally, I have actively managed hosting, domain, DNS, SSL, CDN, staging, and production environments. Previously, I worked for approximately one year at a cybersecurity company, contributing to corporate projects. I am solution-oriented, quick at problem analysis, communicative, and disciplined in remote work environments.

Personal Information

- Date of Birth: 05 October 1996
- Place of Birth: Ankara, Turkey
- Nationality: Turkish
- Driver's License: Class B
- Military Service: Completed

LANGUAGES English C1 Advanced
